2018

CIVIL ENGINEERING (Degree Standard)

Time Allowed: 3 Hours

[Maximum Marks: 300

CECVE/18

Read the following instructions carefully before you begin to answer the questions.

IMPORTANT INSTRUCTIONS

- 1. The applicant will be supplied with Question Booklet 15 minutes before commencement of the examination.
- 2. This Question Booklet contains 200 questions. Prior to attempting to answer the candidates are requested to check whether all the questions are there in series and ensure there are no blank pages in the question booklet. In case any defect in the Question Paper is noticed it shall be reported to the Invigilator within first 10 minutes and get it replaced with a complete Question Booklet. If any defect is noticed in the Question Booklet after the commencement of examination it will not be replaced.
- 3. Answer all questions. All questions carry equal marks.
- 4. You must write your Register Number in the space provided on the top right side of this page. Do not write anything else on the Question Booklet.
- 5. An answer sheet will be supplied to you, separately by the Room Invigilator to mark the answers.
- 6. You will also encode your Question Booklet Number with Blue or Black ink Ball point pen in the space provided on the side 2 of the Answer Sheet. If you do not encode properly or fail to encode the above information, action will be taken as per commission's notification.
- 7. Each question comprises four responses (A), (B), (C) and (D). You are to select ONLY ONE correct response and mark in your Answer Sheet. In case you feel that there are more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each question. Your total marks will depend on the number of correct responses marked by you in the Answer Sheet.
- 8. In the Answer Sheet there are four circles (A), (B), (C) and (D) against each question. To answer the questions you are to mark with Blue or Black ink Ball point pen ONLY ONE circle of your choice for each question. Select one response for each question in the Question Booklet and mark in the Answer Sheet. If you mark more than one answer for one question, the answer will be treated as wrong. e.g. If for any item, (B) is the correct answer, you have to mark as follows:

 $\mathbb{A} \bullet \mathbb{C} \mathbb{D}$

- 9. You should not remove or tear off any sheet from this Question Booklet. You are not allowed to take this Question Booklet and the Answer Sheet out of the Examination Hall during the time of examination. After the examination is concluded, you must hand over your Answer Sheet to the Invigilator. You are allowed to take the Question Booklet with you only after the Examination is over.
- 10. The sheet before the last page of the Question Booklet can be used for Rough Work.
- 11. Do not tick-mark or mark the answers in the Question Booklet.
- 12. Applicants have to write and shade the total number of answer fields left blank on the boxes provided at side 2 of OMR Answer Sheet. An extra time of 5 minutes will be given to specify the number of answer fields left blank.
- 13. Failure to comply with any of the above instructions will render you liable to such action or penalty as the Commission may decide at their discretion.

18.	If a co	omposite bar of steel and brass is heate	d, the	en the brass bar will be under
.,	(A)	Tension	(4)	Compression
,	(C)	Shear	(D)	Torsion

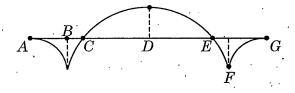

19. Bending stress distribution diagram of a beam rectangular cross section, subjected to transverse loading will be

20. The bending moment for an over hanging beam is shown in figure. The point of contraflexure would include

- (A) A and G
- C and E

- (B) B and F
- \cdot (D) D
- 21. 'Core' of a section is the figure within which load may be placed so as
 - (A) to produce tensile stress at one end and compressive stress at the other end
 - (B) to produce tensile stress at both ends of the section
 - (C) to produce tensile stress in the middle of the section
 - not to produce tensile stress anywhere in the section
- 22. Fletched beam means a
 - (A) continuous beam
 - (B) fixed beam
 - (C) propped cantilever beam
 - beam of composite section consisting of a wooden beam strengthened by mild steel plates

- For a simply supported beam with a point load anywhere on the span. The bending moment is maximum on a section where shearing force
 - is maximum. (A) ·

(B) is minimum

(C) is equal

- changes sign
- If E is the Young's modulus and I is moment of inertia then maximum deflection of a 24. cantilever beam of span 'l' due to pure bending moment 'M' at it free end is

- The failure theory suitable for brittle materials is 25.
 - maximum strain energy
- maximum shear stress energy (B) ·
- maximum principal stress energy
- distortion energy theory (D)
- Maximum principal stress theory was postulated by 26.
 - (A) St. Venant

Rankine

Mohr (C)

- Tresca
- When a tensile or compressive force (P) acts on a body. If E is the Young's modulus, A is 27. cross-sectional area and l is the length, then the change in its length is given by

- (B) $\frac{AE}{Pl}$ (D) $\frac{PA}{lE}$
- If E is Young's modulus and I is moment of inertia, then the expression $EI\frac{d^2y}{dx^2}$ at any 28. section for a beam is equal to
 - load intensity at the section (A)
- shear force at the section. (B)
- bending moment at the section
- (D) slope at the section

- 29. Euler's critical load for a column of equivalent length l_e , moment of inertia I and modulus of elasticity E is given by
 - (A) $\frac{\pi^2 EI}{l_e}$

(B) $\frac{\pi EI}{l_e^2}$

 $\frac{\pi^2 EI}{l^2}$

- (D) $\frac{\pi EI}{l_e}$
- 30. In case of a simply supported rectangular beam of span L and loaded with a central load P, the length of elasto-plastic zone of the plastic hinge is
 - (A) $\frac{L}{2}$

(B) $\frac{L}{4}$

 \mathcal{L} $\frac{1}{8}$

- (D) $\frac{L}{5}$
- 31. The absolute maximum bending moment in a simply supported beam of span 10 m due to moving udl of 4 kN/m spanning over 6 m is
 - (A) 42 kN-m at the support
 - 42 kN-m at the mid point
 - (C) 42 kN-m near the mid point
 - (D) 42 kN-m at 1/3rd of the span
- 32. Slenderness ratio of a column is the ratio of
 - (A) the minimum radius of gyration to the unsupported length
 - unsupported length of column to the minimum radius of gyration
 - (C) minimum radius of gyration to the area of cross-section
 - (D) area of cross-section of the minimum radius of gyration
- 33. For a fixed beam of length L, carrying uniformly distributed load 'w' over the entire span, the plastic moment capacity of the beam, Mp is
 - $\frac{W_c L}{16}$

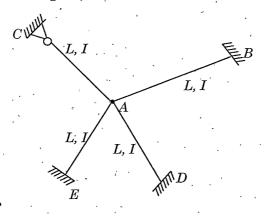

(B) $\frac{16}{W_c L}$

(C) $\frac{W_c L^2}{16}$

(D) $\frac{18}{W_a L^2}$

- 34. In plastic theory, shape factor is defined as the ratio of
 - Plastic modulus of section
 Elastic modulus of section
- (B) Elastic modulus of section Plastic modulus of section
- .(C) Shear modulus of section Plastic modulus of section
- (D) Plastic modulus of section

 Shear modulus of section
- 35. For the structure shown in figure, the ratio of relative stiffness for AB and AC is

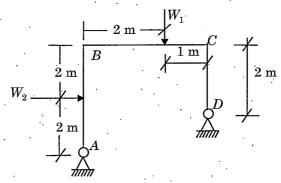

(A) $\frac{1}{2}$

(B) $\frac{3}{4}$

 $\frac{4}{3}$

- (D) 2
- 36. A rigid portal frame ABCD carries loads W_1 and W_2 as shown in figure.

The structure is statically

- (A) determinate
- indeterminate to the first degree
- (C) indeterminate to the second degree
- (D) indeterminate to the third degree

37.		soil mass, the volumeratio	e of solids is e	equal to v	volume of voids.	The values o	of porosity	and
	(A)	1.0 and 0.0	•	(B)	0.0 and 1.0		•	
		0.5 and 1.0		. (D)	1.0 and 0.5			•
•						·		. *
38.		partially saturated ration?	soil, the air	content	is 60%. What	is the value	of degre	ee of
	4	40%		(B)	60%	·		
	(C)	50%		(D)	100%

· · · · · · · · · · · · · · · · · · ·	(C)	ML		(D)	СН	,	•	
	•			•	•			
	~ .		• • •		•		•	
41.	Cohe	sionless soils are best	compacted by	<i>, , ,</i> ,				
41.	4	Vibratory roller	compacted by	7				
41.	(B)	Vibratory roller Sheep foot roller	compacted by	7				
41.	(B) (C)	Vibratory roller Sheep foot roller Rubber tyred roller	; compacted by	7				
41.	(B)	Vibratory roller Sheep foot roller	; compacted by	7				
41.	(B) (C)	Vibratory roller Sheep foot roller Rubber tyred roller	compacted by					
41.	(B) (C) (D)	Vibratory roller Sheep foot roller Rubber tyred roller Drum roller	of a submerg	ed satura			to 0.92. V	Vhat
	(B) (C) (D)	Vibratory roller Sheep foot roller Rubber tyred roller Drum roller	of a submerg	ed satura			to 0.92. V	Vhat
	(B) (C) (D) Underwill I	Vibratory roller Sheep foot roller Rubber tyred roller Drum roller er load, the void ratio to the ultimate settler	of a submerg	ed satura m thick cl	ay due to consoli		to 0.92. V	Vhat

43. A circular area of radius 'a' on the surface of a semi-infinite soil mass is uniformly loaded with a loading intensity of 'q'. The vertical stress σ_z directly below its centre at a depth 'z' is given by

(A)
$$\frac{q}{2} \cdot \frac{z}{\pi} \left(\frac{1}{1 + (\alpha/z)^2} \right)^2$$

$$q \left(1 - \frac{1}{\left[1 + (a/z)^2\right]^{3/2}}\right)$$

(C)
$$\frac{3q}{2\pi z^2} \left(\frac{1}{1 + (a/z)^2} \right)^{5/2}$$

(D)
$$\frac{q}{2\pi z} \left(\frac{1}{1 + (\alpha/z)^2}\right)^{3/2}$$

When the average degree of consolidation U is less than 60% the time factor T is given by

$$T = \left(\frac{\pi}{4}\right)U^2$$

(B)
$$T = \left(\frac{4}{\pi}\right)U^2$$

(C)
$$T = \left(\frac{4}{U}\right)\pi^2$$

(D)
$$T = \left(\frac{U}{4}\right)\pi^2$$

- 45. The bearing capacity factors N_c , N_q and N_r are functions of
 - (A) width and depth of footing
- (B) density of soil

(C) cohesion of soil

- angle of internal friction of soil
- 46. Negative skin friction occurs when
 - the surrounding soil settles more than the fire
 - (B) the driving operation begins
 - (C) the pile passes continuously through a firm soil
 - (D) cast insitu pile was constructed
- 47. The length to diameter ratio of cylindrical specimens used in triaxial test is generally
 - (A) 1

2). 2

(C) 1.5

- (D) 0.5
- 48. If ϕ is the angle of internal friction, the flow value N_{ϕ} is given by
 - (A) $\tan^2(45^\circ \phi/2)$

(B) $\tan(45^{\circ} - \phi/2)$

 $\tan^2(45^\circ + \phi/2)$

(D) $\tan(45^{\circ} + \phi/2)$

49.	For p	proceeding with optinent should be about	num rate of bio	logical a	ctivity in composting process, the moistur	:e
	(A)	25%	,	(B)	45%	
		55%		(D)	75%	
		• .				
50.		5 refers to five days of the five day BOD car			C. If the temperature is increased to 35°(Э,
	(A)	$1\frac{1}{2}$ days	,		$2\frac{1}{4}$ days	
, ·	(C)	$2\frac{1}{2}$ days		(D)	$3\frac{1}{2}$ days	
•	,

	(D)	Radial flow pumps	with double suc	etion		

- 56. In the design of simply supported rectangular RC beams, the development length, L_d is
 - $\frac{0.87 f_{yq}}{4\tau_{bd}}$

(B) $\frac{0.87 f_y}{4\phi \tau_{hd}}$

(C) $\frac{0.78\tau_{bd}}{8f_y}$

 $(D) \quad \frac{0.71 f_y \phi}{3\tau_{bd}}$

where ϕ -nominal diameter of bar , f_{γ} -yield stress

- 57. A flat slab is called a flat plate if
 - (A) the span of slab is large and loads are small, omitting both drop and column head the span of slab is not large and loads are not excessive, omitting both drop and column head.
 - (C) the span of slab is small and loads are small, considering drop
 - (D) the span of slab is small and loads are small considering column head
- - (A) 2.5

(B) 3

(2) 1.5

- (D) 1.75
- 59. Short compression members at the junction of columns and roof trusses or beams are called as
 - (A) boom

(B) principal rafter

(C) post

- knee braces
- 60. Gantry girders are designed as
 - (A) Laterally supported beams
- Laterally unsupported beams
- (C) Longitudinally supported beams
- (D) Longitudinally unsupported beams
- 61. Web buckling occurs when the intensity of vertical compressive stress near the centre of the section becomes
 - (A) Lesser than the critical buckling stress for the web acting as a column
 - Greater than the critical buckling stress for the web acting as a column
 - (C) Equal to the critical buckling stress for the web acting as a column
 - (D) Less than the bending stress

62.	The	sudden failure of a prestressed member	er with	out any warning is due to the
	(A)	Fracture of steel in the compression	zone	
,		Fracture of steel in the tension zone		
	(C)	Rupture of concrete in the tension z	one .	
	(D)	Failure of concrete in the compressi	on zone	
63.	The	system suitable for pre-tensioned pres	traggad	Leonerata mambara is

- 95. If t_o , t_p and t_L represent the optimistic, pessimistic and most likely time estimates, the expected time of completion of the activity is given by
 - (A) $t_E = \frac{t_p + 4t_o + t_L}{6}$

(B) $t_E = \frac{t_o + 2t_L + t_p}{6}$

 $(C) t_E = \frac{t_o + 4t_p + t_L}{6}$

- $t_E = \frac{t_o + 4t_L + t_p}{6}$
- 96. In the absence of detailed design the volume of steel in RCC work (slab) is taken as
 - 0.7% to 1% of RCC volume
 - (B) 1% to 2% of RCC volume
 - (C) 0.3% to 0.5% of RCC volume
 - (D) 1% to 5% of RCC volume
- 97. For reinforced bar cranked at both ends the additional length at 30° angle is equal to
 - (A) $0.4 \, d$

(B) 0.5 d

0.6 d

(D) 0.7 d

where d - centre to centre vertical distance

- 98. Which of the following is general overheads?
 - (A) Losses of advances

Establishment (office staff)

(C) Amenities of labour

- (D) Workmen's compensation
- 99. A record of receipts, issues and running balance of certain articles of stock kept in
 - (A) M-Book

(B) Stock Account

(C) Road Metal Book

- Bin Card
- 100. What is the time by which completion of an activity can be delayed without affecting the start of succeeding activities?
 - (A) Total float

(B) Inteferring float

Free float

(D) Independent float

101.	Accor	rding to Indian Standard Institution mess is	, the	size of Modular Brick excluding mortar
	(A)	$19 \text{ cm} \times 9 \text{ cm} \times 7 \text{ cm}$	0	$19~\mathrm{cm} imes 9~\mathrm{cm} imes 9~\mathrm{cm}$
	(C)	$19 \text{ cm} \times 7 \text{ cm} \times 9 \text{ cm}$	(D)	$20~\mathrm{cm} \times 10~\mathrm{cm} \times 10~\mathrm{cm}$
102.	In aı taker		ment	mortar for 10 cubic metre brick work is
	(A)	0.3 m^3	(B)	1.0 m ³
	(C)	3.0 m^3		$5.0~\mathrm{m}^3$

		20		· · · · · · · · · · · · · · · · · · ·

108.	Which of the following pairs in respect of Oromatched?	dinary Portland Cement (OPC) are correctly
	1. Initial setting time – 30 minutes	
	2. Final setting time – 10 hrs	
	3. Normal consistency – 10%	
	Select correct answer:	
	1 and 2 (B	3) 1 and 3
,	(C) 2 and 3 (D	O) 1, 2 and 3
109.	Increase in fineness of cement	
	(A) reduces the rate of strength development	t and leads to higher shrinkage
	increases the rate of strength developme	nt and leads to higher shrinkage
	(C) increases the rate of strength developme	ent and reduces of the rate of deterioration
	(D) decreases the rate of strength developme	ent and increases the bleeding of cement
110.	The correct sequence of workability test method high workability is	ds in the order of their application from low to
•	(A) slump test, compacting factor and vee-be	ee consistometer
	(B) compacting factor, vee-bee consistometer	and slump test
•	(C) vee-bee consistometer, slump test and co	mpacting factor
•	vee-bee consistometer, compacting factor	and slump test
111.	Consider the following statements:	
	Pozzolana used as an admixture in concrete has	s the following advantages :
	1. It improves workability with lesser amou	unt of water.
	2. It increases host of hydration and so sate	s the concrete quickly

(B)

1, 2 and 4

1, 2, 3 and 4

It increases resistance to attack by salts and sulphates.

It leaches calcium hydroxide.

Select correct answer:

2, 3 and 4

1 and 3

3.

(C)

112.	The	purpose of 'U' fork in plane tabling is					,

118. The radius of Mohr's circle for an equal unlike principal stresses of magnitude or is

where g_{ij} with $g_{ij} = \frac{\sigma}{2}$ and brancing off the area is

(C) zero

(D) 2σ

The case of the section of the secti

to want be good to be group a group of the contract of the entropy of the de-

- 119. The point of zero bending moment, where the continuous curve of bending moment changes sign is called
 - (A) the point of inflation
 - (B) the point of virtual hinge
 - (C) the point of internal hinge
 - the point of contraflexure
- 120. A portion of beam between two section is said to be in pure bending when there is

- (B) constant shear force and zero bending moment
- (C) constant shear force and constant bending moment
- (D) constant shear force and varying bending moment
- 121. The ratio of Moment of Inertia about the neutral axis to the distance of the most distant fibre of the section from the neutral axis is called
 - (A) Moment of Inertia

(B) Polar Moment of Inertia

Section Modulus

- (D) Modulus of elasticity
- 122. A solid shaft of diameter D transmits the torque equal to
 - (A) $\frac{\pi}{64}\tau D^{8}$

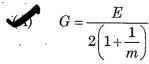

(B) $\frac{\pi}{32}\tau D^3$

 $\frac{\pi}{16}\tau D^3$

(D) $\frac{\pi}{8}\tau D^3$

where τ is the shear stress

123. The rigidity modulus G, in terms of modulus of elasticity E and Poisson's ratio $\frac{1}{m}$ is given by

(B) $G = \frac{2E}{\left(1 + \frac{1}{m}\right)}$

(C)
$$G = \frac{E}{2\left(1 - \frac{1}{m}\right)}$$

- (D) $G = \frac{E}{\left(1 \frac{1}{m}\right)}$
- 124. The shape of the bending moment diagram for simply supported beam carrying a uniformly distributed load over the entire span is
 - (A) linear

(B) cubical curve

(C) circular curve

- parabolic curve.
- 125. For a cantilever beam with a uniformly distributed load "w" per unit run carried for a entire span of length 'l, then the maximum bending moment will be
 - (A) $\frac{wl^2}{3}$

(B) $\frac{wl^2}{4}$

 $\frac{wl^2}{2}$

- (D) $\frac{wl}{2}$
- 126. If σ_1 and σ_2 are principal stresses, the maximum shear stress τ_{max} in terms of principal stresses is given by
 - (A) $\frac{\sigma_1 + \sigma_2}{2}$

(B) $\sigma_1 - \sigma_2$

(C) $\sigma_1 + \sigma_2$

- $\frac{\sigma_1-\sigma_2}{2}$
- 127. If G is the modulus of rigidity and J is the polar moment of inertia then the torsional rigidity of the shaft is
 - (A) G/J

G

(C) J/G

(D) GJ^2

The span and dip of a parabolic cable are L and d respectively. Then the length of the 128. cable(s) is approximately equal to

(A)
$$S = L + \frac{3}{8} \frac{d^2}{L}$$

$$S = L + \frac{8}{3} \frac{d^2}{L}$$
(D)
$$S = L + \frac{8}{3} d$$

(C)
$$S = L + \frac{3}{8}d$$

(D)
$$S = L + \frac{8}{3}d$$

If a beam of length L having Young's modulus 'E' and moment of inertia 'I'. Sinks at one the 129. support by δ , then sinking moment for beam fixed at both the ends is

(A)
$$\frac{3EI\delta}{l^2}$$

$$\frac{6EI\delta}{l^2}$$

(C)
$$\frac{4EI\delta}{l^2}$$

(D)
$$\frac{2EI\delta}{l^2}$$

- In the case of a three-hinged parabolic arch carrying a uniformly distributed load on the 130. entire span, then bending moment will be
 - equal to that of a simply supported beam loaded in the same manner (A)
 - (B) maximum at quarter span
 - (C) zero only at the centre
 - zero throughout the span
- 131. If Q is load factor, S is shape factor and F is factor of safety in elastic design. Pick up the correct relation.

(A)
$$Q = \frac{S}{F}$$

$$Q = S \times F$$
(D)
$$Q = S - F$$

$$\cdot \text{(C)} \qquad Q = S + F$$

(D)
$$Q = S - F$$

- Which is the most important tool in obtaining influence lines for statically determinate and 132. statically indeterminate structures?
 - Eddy's theorem (A)
 - (B) Williot Mohr diagram
 - Muller Breslau method
 - Column Analogy method (D)

133. The reaction locus for a semi-circular arch is

- (A) an ellipse
- (B) a parabolic curve
- (C) a straight line not parallel to $\frac{\pi R}{2}$

a straight line parallel to $\frac{\pi R}{2}$

134. Euler's formula for a long column hinged at both ends is not valid for slenderness ratio

(B) greater than 80

(C) greater than 180

(D) greater than 120

135. Which one of the following is true example of a statically indeterminate structure?

- (A) Overhanging beam
- (B) Simply supported beam

(D) Cantilever beam

136. A cantilever beam subjected to a uniformly distributed load of intensity "w" kN/m propped at free end by a rigid prop to the same level of fixed support. The reaction in the prop is

(B) wl

(C)
$$\frac{wl}{2}$$

· (D) $\frac{5}{8}wl$

137. For a three hinged parabolic arch V_x is sum of the vertical forces on the left hand side of the section, H is the horizontal thrust. If ' θ ' is the angle of tangent at the point on arch with the horizontal, then the radial shear ' R_x ' is given by

 $V_r \cos \theta - H \sin \theta$

(B) $V_x \sin \theta - H \cos \theta$

(C)
$$V_x \sin \theta + H \cos \theta$$

(D) $V_x \cos \theta + H \sin \theta$

138. The given figure shows a portal truss, the influence line diagrams for the member R is

(D)

139. The elements of flexibility matrix of a structure

- (A) are independent of the choice of coordinates
- are dependent of the choice of coordinates
 - (C) are always dimensionally homogeneous
 - (D) both (B) and (C)

140. The three moment equation is applicable only when

- (A) the spans are equal
- (B) the beam is prismatic
- there is no discontinuity such as hinges within the span
 - (D) there is no settlement of supports

141. A three hinged parabolic arch has its abutment at depth of h_1 and h_2 below the crown. It is subjected to a uniformly distributed load w/unit length for the whole span. If the span of the arch is l, the horizontal thrust at each support is given by

$$(A) \qquad \frac{wl}{\sqrt{h_1^2 + h_2^2}}$$

$$rac{wl^2}{2(\sqrt{h_1}+\sqrt{h_2})^2}$$

(B)
$$\frac{wl}{h_1 + h_2}$$

(D)
$$\frac{wl^2}{(h_1 + h_2)^2}$$

142.	Mat	ch List	I with I	ist II an	ıd selec	t the	correct answers using the codes given below:
	•	Ļist l	[List II
	(a)	Ultin	nate bear	ring capa	acity	1.	Net loading intensity at which neither soil fails in shear nor is there any excessive settlement
•	(b)	Net s	afe bear	ing capa	city	2.	The maximum pressure which soil can carry safely without risk of shear failure
	(c)	Safe	bearing (capacity		3.	Net ultimate bearing capacity divided by factor of safety
. •	(d)	Allow	vable bea	ring pre	ssure	4.	Minimum gross pressure intensity at the base of foundation at which soil fails in shear
		(a)	(b)	(c).	(d)		
	. (1.)	4	3	2	. 1		
	(B)	2	1	4	3		
	·(C)	1	2	. 4	3		

- 143. According to Skempton's formula for a surface footing of square shape, the net ultimate bearing capacity on a purely cohesive soil of cohesion 'C' is
 - (À) 1.5 C

(D)

6.0 C

(C), 10.0 C

- (D) 15 C
- 144. A foundation has a depth of embedment less than its width is known as
 - shallow foundation

(B) deep foundation

(C) pile foundation

- (D) well foundation
- 145. Compression index of a soil helps to determine
 - (A) total time required for consolidation

3

- (B) time required for 50% consolidation
- consolidation settlement of clay soil
- (D) pre-consolidation pressure of clay

146. The following data refer to a sample of soil:

Percent passing 4.75 mm IS siever - 71

Percent passing .75 µ IS siever – 4

Uniformity coefficient -7.5

Coefficient of curvature -2.7

The soil is classified as

sw

(B) GW

(C) SM

(D) GM

147. Consistency Index of a soil is defined as the ratio of

- the difference between liquid limit and the natural water content to the plasticity index of a soil
- (B) the difference between natural water content and the liquid limit to the plasticity index of a soil
- (C) the difference between plasticity index and the liquid limit to the natural water content of a soil
- (D) the difference between plasticity index and the natural water content to the liquid limit of a soil

148. If N_f , N_d and H are total number of flow channels, total number of potential drops and total hydraulic head differences respectively, where K is the coefficient of permeability, the discharge on flow per unit length q is given by

(A) $q = KH^{1/2} \frac{N_f}{N_d}$

 $q = KH \frac{N_f}{N_J}$

(C) $q = K^{1/2}H\frac{N_f}{N_d}$

(D) $q = KH \sqrt{\frac{N_f}{N_d}}$

149. For collecting undisturbed samples, the area ratio of sampler is to be

(A) 0.

<10%

(C) >10%

(D) 100%

150. One of the following is not related to the common types of collection equipment of aerosols

(A) Settling chambers

(B) Cyclones

(C) Filters

Grit chambers

151.	A wa	ter-borne disease caused by proto	zoa ·	
. •	(A)	Cholera	(B)	Paratyphoid
	(<u>C</u>)	Histoplasmasis		Amoebic dysentry

	· _ ·			
157.		columns with both ends restrain s the least lateral dimension of co		_ = = =
	(A)	Less than 60	(B)	Greater than 50
	(C)	Less than 40		Greater than 60
			_	
158.		e design of columns for the long the periphery of the column sha		nforcement, the spacing of bars measured
	(A)	200 mm	(B)	250 mm
	(4	200	· · · (D)	250

- 159. Bearing stiffeners are provided
 - (A) at the end and on both faces of the web
 - (B) at the end of a plate girder
 - at the points of concentrated loads
 - (D) throughout the span
- 160. The loads to be considered for the design of a gantry girder are:
 - (A) Gravity load
 - (B) Lateral load and longitudinal load
 - Gravity load, lateral load and longitudinal load
 - (D) Gravity load, wind load and longitudinal load
- 161. The provision of intermediate stiffeners is to
 - (A) Enhance the bearing capacity of the web
 - (B) Resist the applied loads
 - Provide stiffness to the web
 - (D) Enhance the buckling capacity of the web
- 162. The high tensile steel tendon in a prestressed concrete member
 - (A) Remains under a constant stress
 - Does not remain under a constant condition of either stress or strain
 - (C) Remains under a constant strain
 - (D) Remains under a varying stress
- 163. If a concrete beam is subjected to an eccentric prestressing force of magnitude P, at an eccentricity e, the stress developed at the bottom fibre of the beam is

$$\frac{P}{A} + \frac{P_e}{z_b}$$

(B)
$$\frac{P}{A} - \frac{P_e}{z_b}$$

(C)
$$-\frac{P}{A} - \frac{P_e}{z_b}$$

(D)
$$-\frac{P}{A} + \frac{P_e}{z_b}$$

where A – cross sectional area of the concrete member

 z_b -section modulus of the bottom fibre

164.	The	device which are used for measuring d	ischar	ge in open channels
	(A)	Orifice-meter	(B)	Orifice
•	ST	Venturi flume	(D)	Pitot tube
	,			
165.	If the	e velocity of flow of fluid changes from low is said to be	point	to point in the flowing fluid at any instant
	Vis .	Non-Uniform	(B)	Uniform
•	(C)	Steady	(D)	Unsteady
•				
166.	The o	depth of a uniform flow is called		
		Normal depth	(B)	Minimum depth
	(C).	Maximum depth	(D)	Negative depth
•				
167.	The t	ime period that elapses from the insta	nt of s	sowing to the instant of harvesting is called
	as	ported that orapses from the mate	alle OL s	sowing to the instant of narvesting is called
,	(A)	Base period	(B)	Growth period
:	(6)	Crop period	(D)·	Rotation period
•			•	
168.	The e	efficiency of sprinkler irrigation in mod	lerate	climate is
	(A)	60%	(20)	70%
•	(Ć)	80%	(D)	90%
169.	A lan	d is considered to be prone to water lo	gging v	when the water table is
		within 1.5 m of ground surface		within 2 m of ground surface
	(C)	within 3 m of ground surface	(D)	within 3.5 m of ground surface
		•		
170.	A pite	ot tube is used for measuring		
•	1	Velocity of flow	(B).	Pressure of flow
	(C)	Flow rate	(D)	Total energy
•		•		
171.	For m	nost economical trapezoidal section, th	a host	side slape is at
	(A)	30° to the horizontal	(B).	45° to the horizontal
		60° to the horizontal	(D)	90° to the horizontal
		, , , ,	(2)	o o outo mornomial .

172.				gh and 3 m wide running full with wate N/m ² The total pressure on the gate is
	(A)	4 kN	(B)	$5.008 imes 10^6 m N$
,	(C)	8 MN		3.001×10^6N
173.	Vort	icity is given by	,	
	(A)	3.0 times the rotation	(B)	3.5 times the rotation
	4	2.0 times the rotation	(D)	1.5 times the rotation
			• •	
174.	The o	discharge through a V-notch varies	as	
	(A)	$H^{1/2}$	(B)	H
	(A) (C)	$H^{3/2}$	(E)	$H^{5/2}$
,*	. (0)	H	, (30)	
				_
175.		ified Pul's method of reservoir routing	ng is also	known as
	(A)	Muskingum method		
		Storage indication method		
	(C)	Inflow storage discharge method		
	(D)	Inflow discharge storage method		
i			ı	
176.	1.5 c	•	_	hour storn with a uniform intensity of sin is 300 km ² , the average infiltration rat
	٠	7 mm/h	(B)	9 mm/h
	(A)	3 mm/h	(B)	9 mm/h 4 mm/h
	()		(D)	
177.		cemeter is used to measure		
	(A)	average velocity	· (B)	velocity at a point
,		discharge	(D)	pressure at a point
,	٠,			
178.	.The l	ength of all streams per unit area o	f a waters	hed is called
	(A)	Stream density	(25)	Drainage density
. •	(C)	Stream coefficient	(D)	Drainage coefficient
٠ .	•			

- 179. If R is the radius of a main curve and L is the length of the transition curve, the shift of the curve, is
 - (A) $L_s/24R$

(3) $L_s^2/24R$

(C) $L_s^3/24R$

(D) $L_s/12R$

- 180. Bitumen is soluble in
 - (A) carbon tetra sulphide
 - (C) nitrogen chloride

- carbon disulphide
 - (D) potassium chloride
- 181. If V is the design speed of vehicles in km/hour, the allowable rate of centrifugal acceleration
 - (A) $\frac{70}{70+V}$
 - (C) $\frac{75}{75+V}$

- $\frac{80}{75+V}$
- (D) $\frac{65}{70+V}$
- 182. Permanent track is regarded to be
 - (A) Elastic in nature
 - (C) Flexible

- Semi-elastic in nature
- (D) Viscous foundation
- 183. The height of semaphore signal is
 - (A) 7 m
 - (C) · 8 m

- 7.5 m
- (D) 9.5 m

184. ICAO stands for

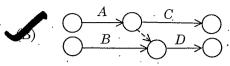

- (B) International Civil Aircraft Organization
- (C) International Civil Aerodrome Office
- (D) International Council Airtraffic Office

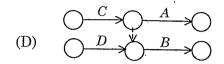

185.	Mat lists		rrect	answer by using the codes given below th
		List I	Lis	st II
ů.		(Type of road)	(W	idth of carriage way)
	(a)	Single lane road	1.	7.0 m
4	(b)	Two lanes road with out kerbs	2.	7.5 m
	(c)	Two lanes road with raised kerbs	3.	3.75 m
	(d)	Multi-lane road	4.	3.5 m per lane
	_	(a) (b) (c) (d)		
	(1)	3 1 2 4		
	(B)	1 2 3 4		
	(C)	4 3 2 1		
	(D)	3 2 4 1	•	
	:			
186.	The	e grade compensation for a hill road with	hori	zontal curve of radius 60 m is
		1.5%	(B)	
	(C)	3%	(D)	
·.	(-)			
	.			
187.		general requirement in constructing a re inforcement	intor	ced concrete road is to place a single layer o
	(A)	Near the bottom of the slab		Near the top of the slab
	(C)		· (D)	
	(0)			0.1110 ott 9.111 3 0.1110
	··			
188.		e corner wheel load stress for a rigid pav ording to gold beck formula is	emer	nt of 20 cm thick and wheel load of 4000 kg
	(A)	20 kg/cm ²		\sim 30 kg/cm ²
•	(C)	80 kg/cm ²	(D)	$40~\mathrm{kg/cm^2}$
; `	(0)	, oo kg/cm	(1)	TO REJOIN
189.	Choo	pose the correct statement	•	
	(A)	Take-off is along wind direction	•	
, .	(B)	Landing is along wind direction	•	
•		Take-off and landing is always opposi		· · · · · · · · · · · · · · · · · · ·
	(D)	Take-off and landing is along wind di	rectio	on

190. Activity 'C' follows activity 'A' and activity 'D' follows activities 'A' and 'B'. The correct network of the project is

191. In the process of determining the quality of large group, reliability is expressed as

(A) Reliability Number =
$$1 - \left[\frac{\text{No. of defective units}}{\text{No. of units tested}} \times 100 \right]$$

(B) Reliability Number =
$$1 - \left[\frac{\text{No. of units tested}}{\text{No. of defective units}} \times 100 \right]$$

Reliability Number =
$$100 - \left[\frac{\text{No. of defective units}}{\text{No. of units tested}} \times 100 \right]$$

(D) Reliability Number =
$$100 - \left[\frac{\text{No. of units tested}}{\text{No. of defective units}} \times 100 \right]$$

192. Lead time in material management means

- (A) Elapsed time
- (B) Time delay factor
- (C) Both (A) and (B)

Time elapsed between ordering, receiving and putting material into use

193. The optimistic, most likely and pessimistic time estimates of an activity are 8, 10, 12 days respectively. What is the expected time?

(A) 9 days

(C) 11 days

(D) 12 days

194. Which one of the statement is correct?

- (A) An unconfined compression test is a special case of direct shear test
- (B) An unconfined compression test is a special case of vane shear test

An unconfined compression test is a special case of triaxial compression test

(D) The confining pressure is maximum during an unconfined compression test

- 195. The estimate prepared for technical sanction of the competent authority should attached with
 - (A) Detailed specification

(B) Report

(C) Abstract

- Both detailed specification and report
- 196. The person or a firm who undertakes a contract to execute a work or to supply the material is termed as
 - (A) Competent authority

(B) Contract work

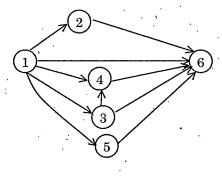

Contractor

- (D) Scheduled contractor
- 197. The brick work is not measured in cu.m in case of
 - (A) Brick work in arches

(B) Brick work in foundation

Half brick work

- (D) Reinforced brick work
- 198. The number of errors in the given network is

(B) 2

(C) 3

(D) 4

- 199. Bar chart is drawn for
 - (A) Time Vs resources

(B) Time Vs progress

- 400
- Time Vs activity

- (D) Activity Vs resources
- 200. The rule of numbering the events is introduced by
 - D.R. Fulkerson

(B) F.W. Taylor

(C) Henry Gantt

(D) M.R. Kelly
